最近、Mac遅くないですか？

A cinematic still from a zombie movie. In the foreground, a young man with short dark hair is looking directly at the camera with a desperate expression. His face is smeared with blood, particularly around his eyes and mouth. He is wearing a dark, short-sleeved button-down shirt. Behind him, a dense crowd of zombies is visible, some with pale skin and blood on their faces. One zombie in the background has its hand raised. The scene is set outdoors in a bright, possibly overexposed, environment.

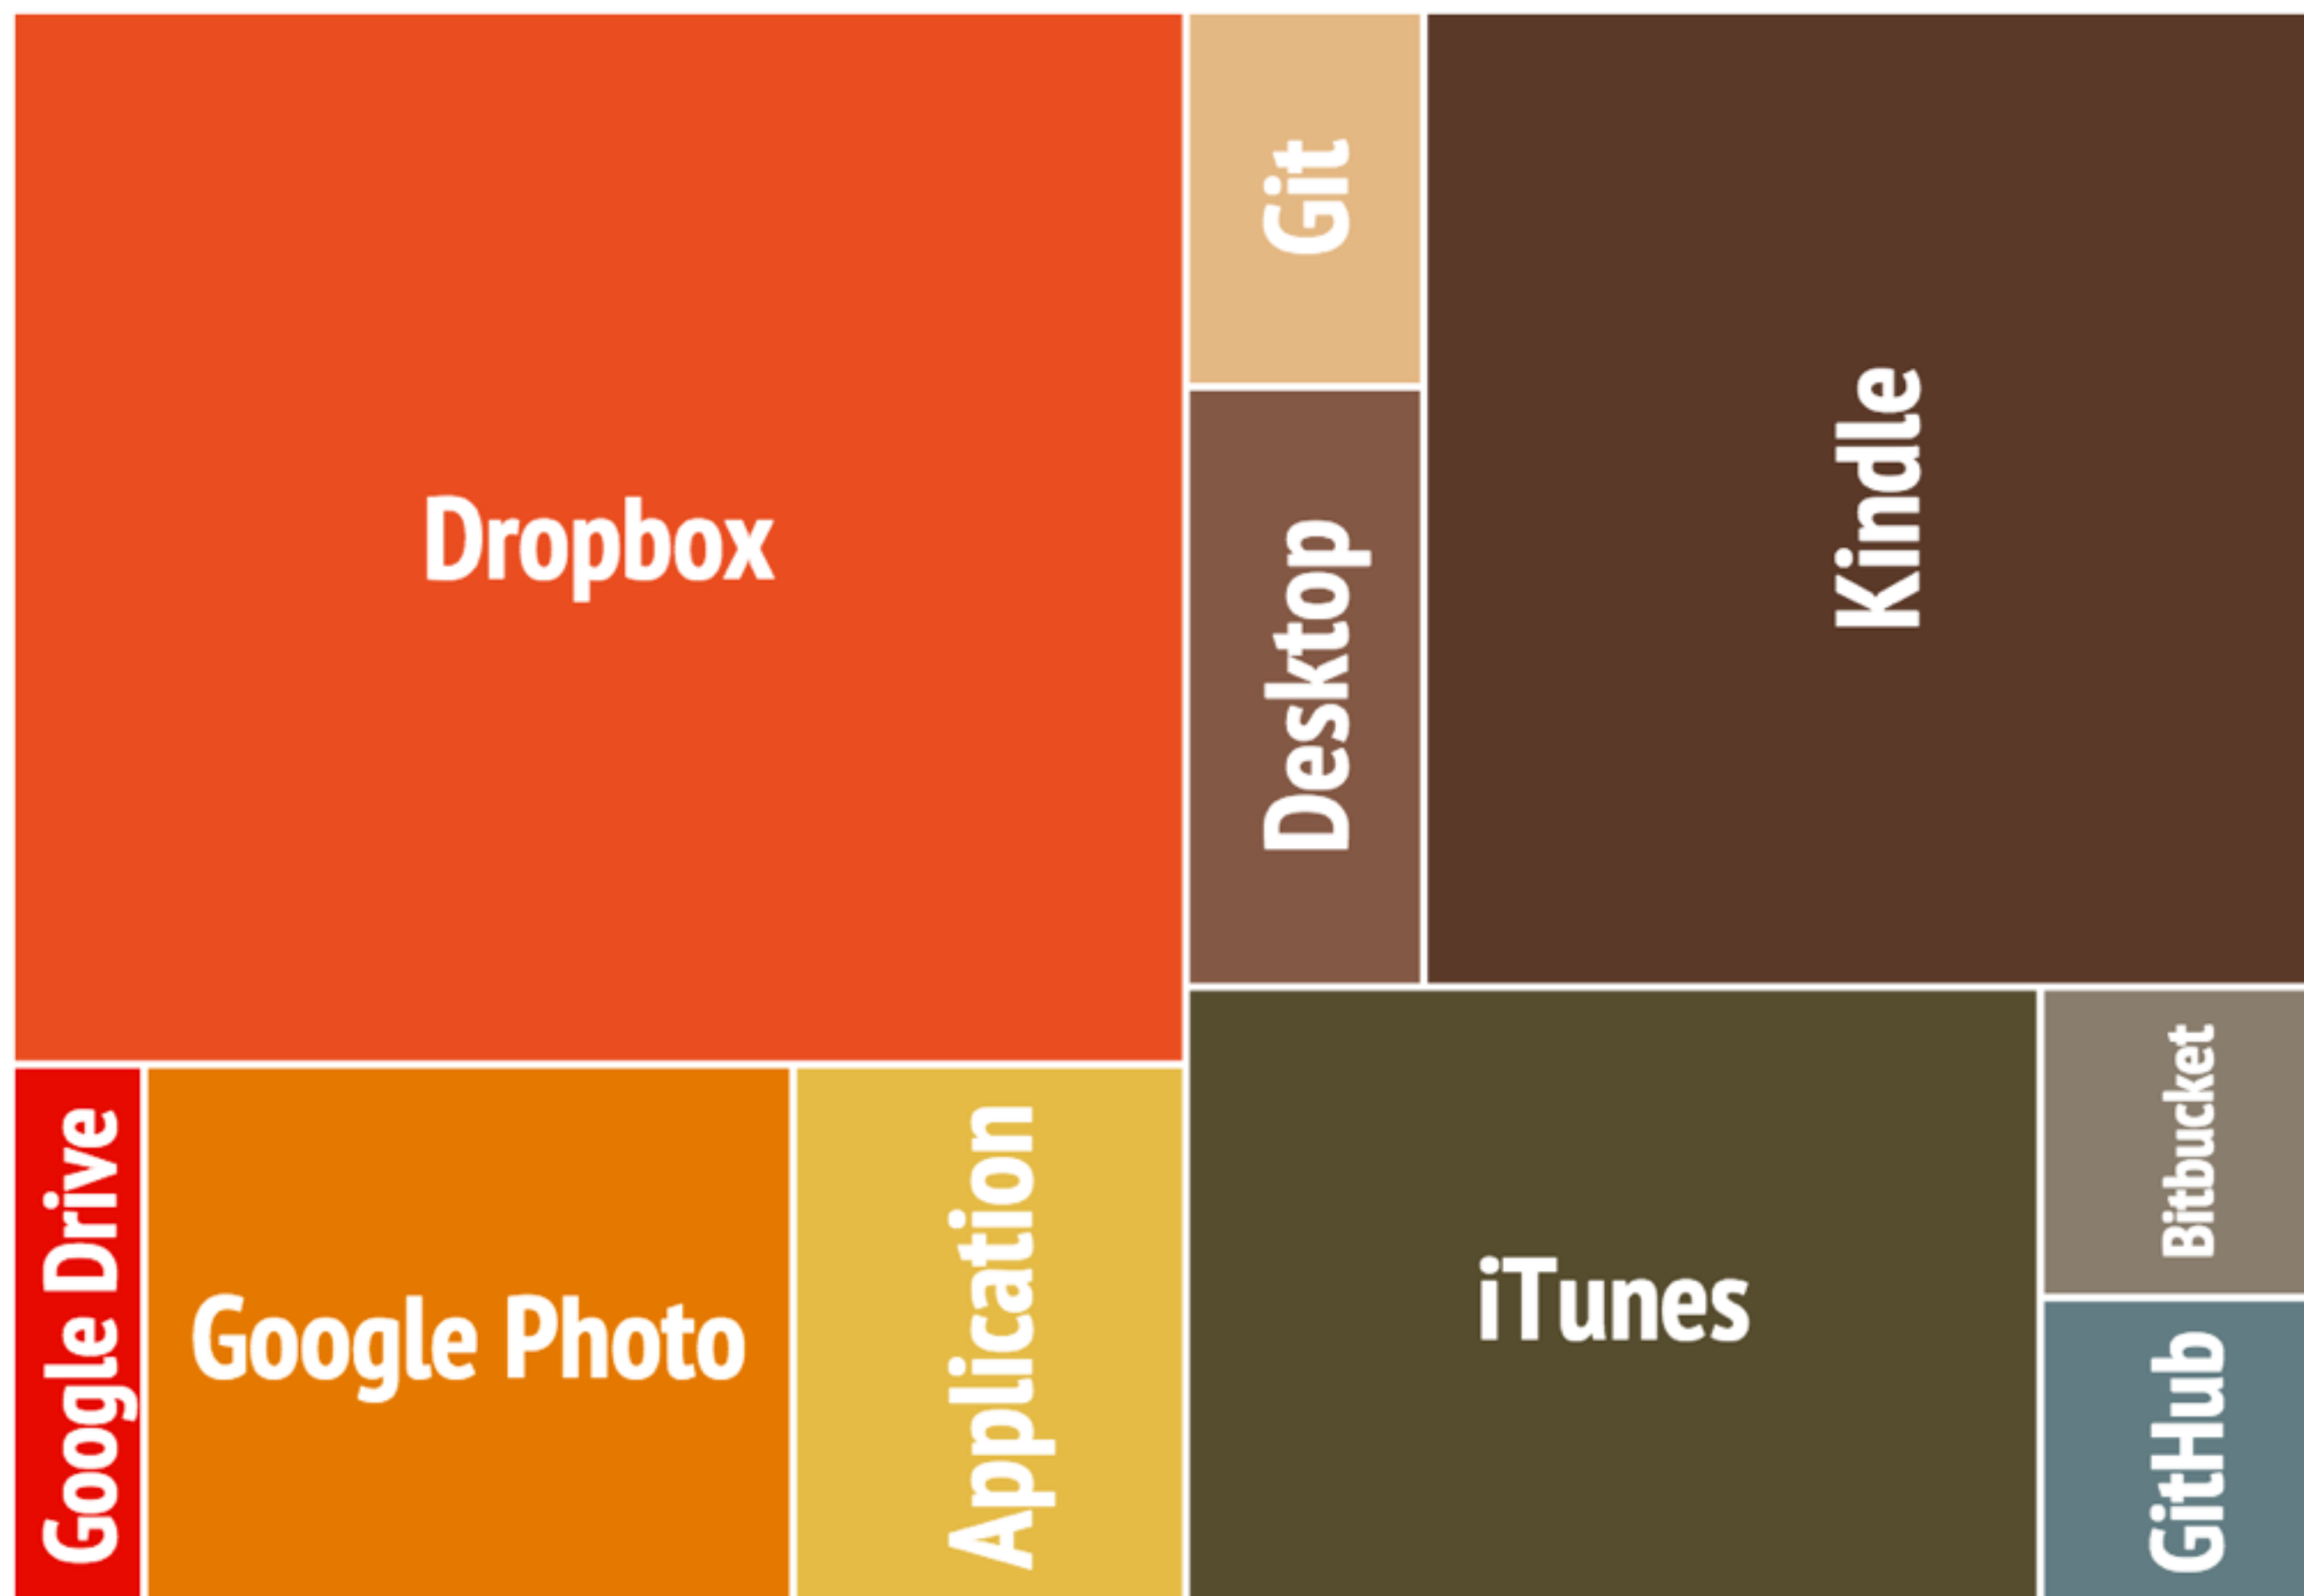

近年、ゾンビ症例が
後を絶ちません

原因

熟成された秘伝のタレ

	アップグレード	クリーンインストール
	手軽に環境を引き継げる	OSが理想的な状態に
	不要なゴミがたまる	環境の再構築が大変

一方でデータは
ほとんど
クラウドに

もっと身軽になりたい

そのための、 Dotfiles

Dotfiles

元々は、単に"."で始まる
~/ 直下のファイルを晒すもの

最近は...

各種のインストールスクリプト

具体的に、Dotfilesで何ができるの？

例

github.com/cognitom/dotfiles

The screenshot shows the GitHub repository page for `cognitom/dotfiles`. The repository has 23 commits, 1 branch, 0 releases, and 1 contributor. The latest commit, `428a848672`, was authored 14 seconds ago. The commit message is "Add fontawesome via Cask font". The repository contains the following files and folders:

File/Folder	Commit Message	Time Ago
<code>atom</code>	Clean up.	26 days ago
<code>lib</code>	Clean up.	26 days ago
<code>script</code>	Add fontawesome via Cask font	13 seconds ago
<code>README.md</code>	TheHub -> PopHub	a day ago
<code>bootstrap.sh</code>	Clean up.	26 days ago

The `README.md` file is selected, showing the following content:

Dotfiles without dotfiles

Good bye my dotfiles. I realize that I'm not using these so much these days. So, this is just a task list of Mac setup for me.

- Target: Mac OS X Yosemite

1: Xcode

Install Xcode via App Store.

- Xcode

Make sure to launch Xcode and agree the license.

2: Automated

Download this repo, then run the script.

実体は、*ただの*シェルスクリプト

例

```
$ sh bootstrap.sh
```

インストール環境整備

```
2
3 # homebrew
4 ruby -e "$(curl -fsSL https://raw.githubusercontent.com/Homebrew/install)"
5 brew tap homebrew/php
6 brew tap caskroom/fonts
7
8 # nodebrew
9 curl -L git.io/nodebrew | perl - setup
10 echo export PATH=~/.nodebrew/current/bin:~/.nodebrew/bin:$PATH >> ~/.profile
11 source ~/.profile
12 nodebrew install latest
13 nodebrew install stable
14 nodebrew use latest
15
```

homebrew

nodebrew

コマンドラインツールたち

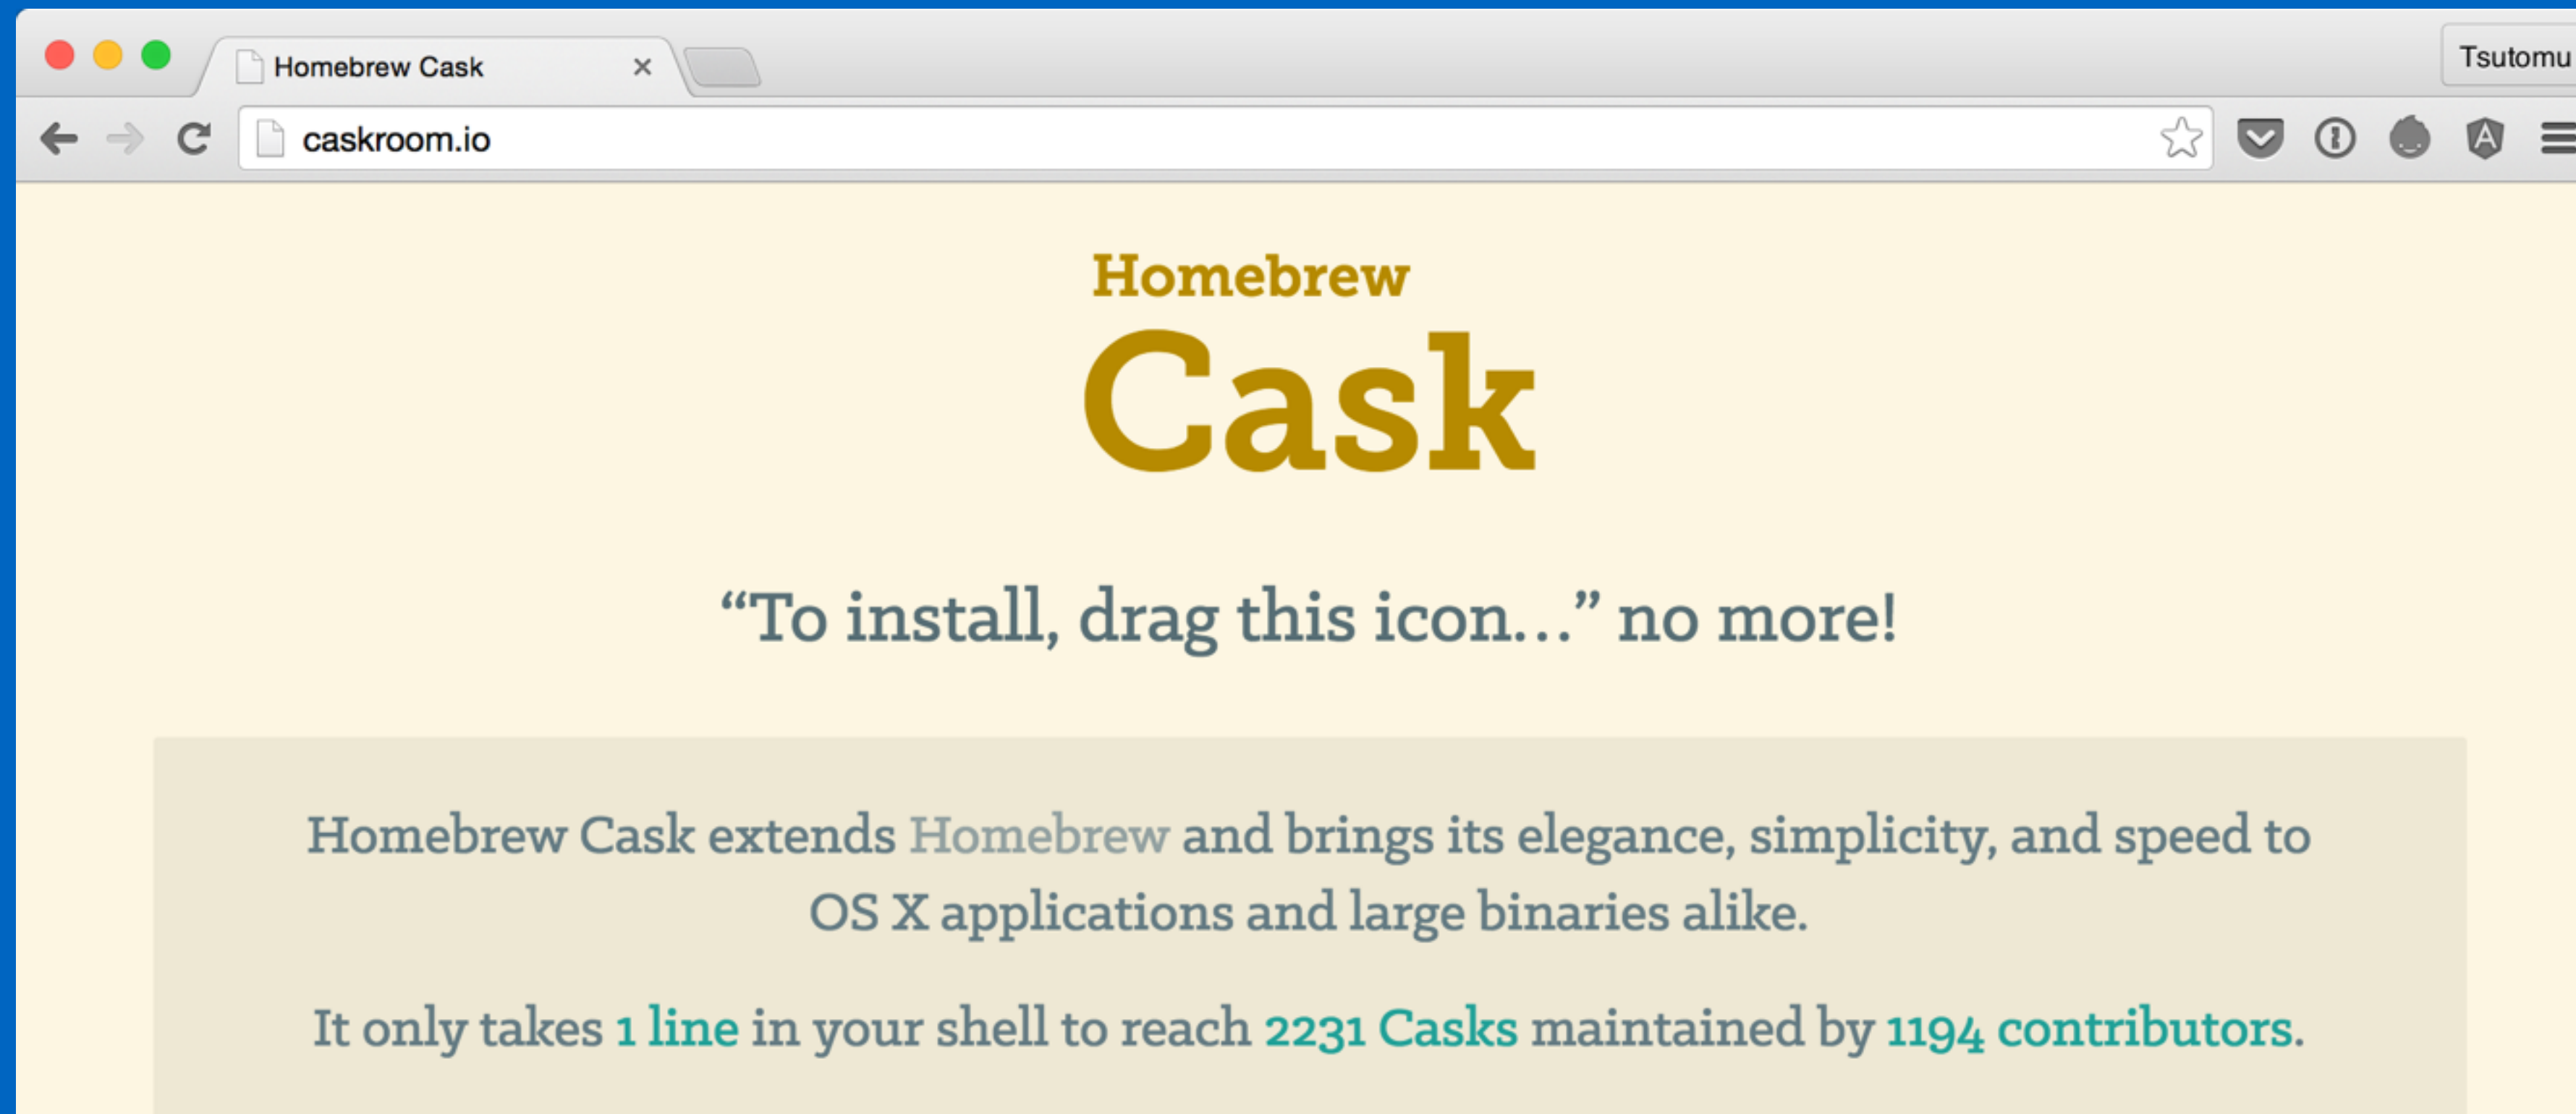

```
16 # tools via brew
17 brew install caskroom/cask/brew-cask
18 brew install git
19 brew install hub
20 brew install ansible
21 brew install wget
22 brew install php55
23 brew install mcrypt
24 brew install php55-mcrypt
25 echo export "PATH=\$(brew --prefix php55)/bin:\$PATH" >> ~/.profile
26
27 # tools via npm
28 npm install -g bower
29 #npm install -g coffee-script
30 npm install -g gulp
31 npm install -g gulp-straw
32 npm install -g istanbul
33 npm install -g david
34 npm install -g node-inspector
35 npm install -g superstatic
36
37 # tools via gem
38 sudo gem install slim
39
```

git, ansible, ...

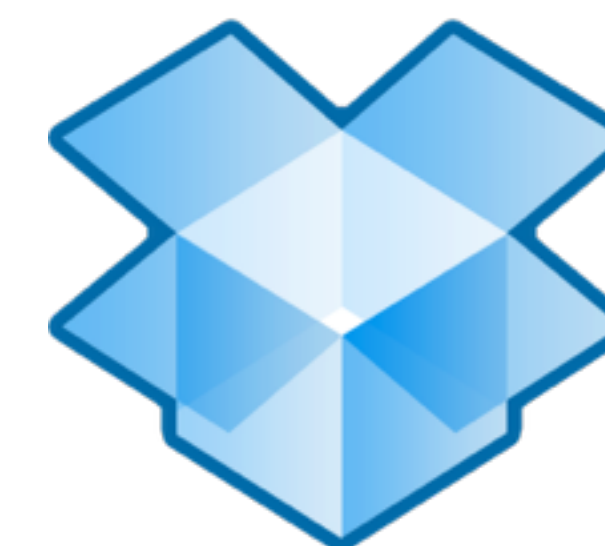

node系ツール

gem

デスクトップアプリは?

```
39
40 # desktop apps via cask
41 export HOMEBREW_CASK_OPTS="--appdir=/Applications"
42 brew cask install 0xed
43 brew cask install 1password
44 brew cask install atom
45 brew cask install brackets
46 brew cask install chocolat
47 brew cask install coteditor
48 brew cask install dropbox
49 brew cask install espresso
50 brew cask install fake
51 brew cask install firefox
52 brew cask install github
53 brew cask install google-chrome
54 brew cask install google-drive
55 brew cask install ksdiff
56 brew cask install mailplane
57 brew cask install marked
58 brew cask install pandoc
59 brew cask install querious
60 brew cask install skype
61 brew cask install sourcetree
62 brew cask install vagrant
63 brew cask install vagrant-manager
64 brew cask install virtualbox
65 brew cask install vlc
66
```

そのほか、いろいろ

```
60
67 # fonts via caskroom-fonts
68 brew cask install font-fontawesome
69 brew cask install font-lobster
70 brew cask install font-noto-sans-japanese
71
72 # packages via apm
73 apm install file-icons
74 apm install language-haskell
75 apm install monokai
76 apm install regex-railroad-diagram
77
78 # other tools
79 sudo sh ./lib/sketchtool.sh
80 sudo sh ./lib/composer.sh
81
```

Atom拡張

独自インストーラ

設定編

defaults コマンド

```
-
3 # Finder
4 defaults write NSGlobalDomain NSNavPanelExpandedStateForSaveMode -bool true
5 defaults write NSGlobalDomain NSNavPanelExpandedStateForSaveMode2 -bool true
6 defaults write NSGlobalDomain AppleShowAllExtensions -bool true
7
8 # Safari
9 defaults write com.apple.Safari IncludeDevelopMenu -bool true
10
11 # Chrome
12 defaults write com.google.Chrome DisablePrintPreview -bool true
13
14 # Preview (doesn't work in Yosemite. Umm...)
15 #defaults write com.apple.Preview PVIImagePrintingAutoRotate 0
16 #defaults write com.apple.Preview PVIImagePrintingScaleMode 0
17
18 # Adobe Illustrator
19 defaults write com.adobe.illustrator AppleLanguages '("ja")'
20
```

Finder

Safari

Chrome

Preview

狭義のDotfiles

```
21 | # Atom
22 | cp -R atom ~/.atom
```

Atomの設定

Dotfilesも万能ではない

けど、すごく楽になります
